
POSTER SESSION

- Stephany Angarita** Characterizing centromere and telomere sequences in the genomes of the aquatic ferns *Azolla filiculoides* and *Salvinia cucullata*
- Briana Boaz** Ectomycorrhizal community effects on Monterey pine resistance to pitch canker
- Maisie Borg** Long-term effects of CO₂ enrichment on plant genome and cell size
- Jenna Braun** Pollination facilitation by foundational plants in an arid ecosystem
- Shane Dewees** Sensitivity of obligate seeding chaparral shrubs in Los Angeles and Ventura counties
- Adriana Hernandez** Genotyping using microsatellites shows strong genetic differentiation among populations of the Channel Islands endemic plant, *Malva assurgentiflora* (Malvaceae)
- Sierra Lauman** Restoration of invaded walnut woodlands using a trait-based community assembly approach
- Carina Motta** Genetic analysis of putative species of *Suaeda*
- Madeline Nolan** The impact of drought and local genotypes on *Stipa pulchra* restoration
- Emily ODean** The establishment and success of Sierra Nevada conifer seedlings under prolonged, climate-induced stress
- Lauren Quon** Facilitative effects of nurse shrubs on growth and survival of California sage scrub native plants
- Mizael Seminatore** Does grazing of compost-amended grasslands impact carbon sequestration?
- Steven Serkanic** Patterns of polyploid formation in manzanitas
- Kayla Sweeten** Phylogeography of *Arctostaphylos uva-ursi*
- Mary Yan** Abiotic Conditions of *Trillium ovatum* at Big Basin Redwoods State Park
